SP Machines - Database Usage Report

Generated from the Django models and `LEGACY_MODELS` in `config/settings/base.py`.

Two databases are used:

- **default (SQLite - app data)**: application-only tables created and migrated by Django.
- **legacy (SQL Server - old VFP database)**: the old VFP tables. Django reads and writes them but does not create them (`managed = False`).

Master (Items)

Model	Table	Database	Managed
Item	`item`	legacy (SQL Server - old VFP database)	no

Master (Parties)

Model	Table	Database	Managed
Party	`cust_mst`	legacy (SQL Server - old VFP database)	no

Master (Parts)

Model	Table	Database	Managed
Part	`part-mst`	legacy (SQL Server - old VFP database)	no

Master (BOM)

Model	Table	Database	Managed
BomComponent	`con-mst`	legacy (SQL Server - old VFP database)	no
BomSaComponent	`conms`	legacy (SQL Server - old VFP database)	no

Master (Supervisors)

Model	Table	Database	Managed
Supervisor	`sup_mst`	legacy (SQL Server - old VFP database)	no

Master (Vendors / Units / Marketing / Reps / GL / GST)

Model	Table	Database	Managed
Unit	`unit`	legacy (SQL Server - old VFP database)	no
MarketingManager	`mm_mst`	legacy (SQL Server - old VFP database)	no

Rep	`rep_mst`	legacy (SQL Server - old VFP database)	no
Ledger	`gled_mst`	legacy (SQL Server - old VFP database)	no
GstRate	`gst`	legacy (SQL Server - old VFP database)	no

Purchase Order

Model	Table	Database	Managed
PurchaseOrderHeader	`pord_mst`	legacy (SQL Server - old VFP database)	no
PurchaseOrderItem	`order`	legacy (SQL Server - old VFP database)	no
PartRateHistory	`rt_mst`	legacy (SQL Server - old VFP database)	no
CreditorOut	`cr_out`	legacy (SQL Server - old VFP database)	no
MrnData	`mrn_dat`	legacy (SQL Server - old VFP database)	no
ItemMasterTransaction	`imaster`	legacy (SQL Server - old VFP database)	no
PurchaseOrderShareLink	`purchase_orders_purchaseordersharelink`	default (SQLite - app data)	yes
PendingLetterShareLink	`purchase_orders_pendinglettersharelink`	default (SQLite - app data)	yes

MRN

Model	Table	Database	Managed
InvNo	`inv_no`	legacy (SQL Server - old VFP database)	no
MrnData	`mrn_dat`	legacy (SQL Server - old VFP database)	no
MrnShareLink	`mrn_mrnsharelink`	default (SQLite - app data)	yes
MrnAuditLog	`mrn_mrnauditlog`	default (SQLite - app data)	yes

Returnable Challan

Model	Table	Database	Managed
InvNo	`inv_no`	legacy (SQL Server - old VFP database)	no
GchlHeader	`gchl_mst`	legacy (SQL Server - old VFP database)	no
GchlLine	`gchl_dat`	legacy (SQL Server - old VFP database)	no

Job Card

Model	Table	Database	Managed
InvNo	`inv_no`	legacy (SQL Server - old VFP database)	no
JobCard	`new_job`	legacy (SQL Server - old VFP database)	no
JobLine	`imaster`	legacy (SQL Server - old VFP database)	no
StockBalance	`stock`	legacy (SQL Server - old VFP database)	no

Legacy tables used by more than one module

These are the links between modules: a write from one module is visible to the others.

Table	Modules that use it
`imaster`	Job Card, Purchase Order
`inv_no`	Job Card, MRN, Returnable Challan
`mrn_dat`	MRN, Purchase Order

Relations between modules

- **Purchase Order -> Master:** PO lines use Items, Parties and Parts (`imaster`, `order` tables).
- **MRN -> Purchase Order:** MRN lines are written to `imaster` and update the PO received quantities (`order`).
- **MRN -> Master:** MRN uses Parties, Items and Parts for names, rates and stock.
- **Job Card -> Master:** job cards read Items, BOM (`con-mst`) and Parts; they reduce component stock.
- **Job Card -> MRN/imaster:** job issue and receive lines are written to `imaster` with status S and P.
- **Returnable Challan -> Master:** challans read Parties and Parts; they do not change stock.
- **MRN audit log:** `MrnAuditLog` in the app database records every MRN add, modify, close and delete.
